Abode Admin v1 — Backend issues

Branch main-v1 · Recorded 19 October 2026

These errors come from the backend the v1 admin talks to. All nine routes below fail when they load their data. Eight are **schema mismatches**: the admin asks for a query, type, argument or field the API does not have, so GraphQL rejects the whole request before it runs. The ninth (Completed Asset Payments) is a **runtime error**: the request is valid, but the resolver fails while running.

The schema mismatches are all reported with status code 500. They are really request-validation errors, so the backend's error handling could return them as 400 to tell them apart from real server faults.

Summary

#	Route	Path	Type	Errors
1	Company Events	`/company-events`	Schema mismatch	2
2	Sales	`/sales`	Schema mismatch	2
3	Users — Completed Asset Payments	`/users/completed-asset-payments`	Runtime error	1
4	Associate Upgrade	`/associate-upgrade`	Schema mismatch	3
5	Associates — Performance	`/associates/performance`	Schema mismatch	1
6	Associates — Managers	`/associates/managers`	Schema mismatch	1
7	Customer Success — CS Manager Performance	`/customer-managers`	Schema mismatch	23
8	Customer Success — Tickets	`/tickets`	Schema mismatch	2
9	Customer Success — Issues	`/issues`	Schema mismatch	2
	Total			**37**

1. Company Events

Path: `/company-events` **Type:** Schema mismatch
Request: GetCompanyEvents — features/company-events/hooks/use-company-events.ts

Impact. The events list cannot load, so the whole Company Events section is unusable.

Status	Error message
500	`Unknown type "CompanyEventFilterInput". Did you mean "MeetingListFilterInput"?`
500	`Cannot query field "companyEvents" on type "Query".`

What the backend needs

• Input type `CompanyEventFilterInput`
• Query `companyEvents`

2. Sales

Path: `/sales` **Type:** Schema mismatch
Request: GetSalesRecord / ExportSales — features/sales/hooks/use-sales.ts, use-sales-export.ts

Impact. The sales table and export fail because the request asks for two fields the API does not have.

Status	Error message
500	`Cannot query field "land_payment_completed_date" on type "SalesRecord".`
500	`Cannot query field "name_on_document" on type "SalesRecord".`

What the backend needs

- Field `SalesRecord.land_payment_completed_date`
- Field `SalesRecord.name_on_document`

3. Users — Completed Asset Payments

Path: `/users/completed-asset-payments` **Type:** Runtime error
Request: GetUsersWithZeroBalance — features/transactions/hooks/use-complete-asset-transactions.ts

Impact. The page loads with no data. The response is `"data": null`.

Status	Error message
400	`Failed to fetch users with zero balance`

What the backend needs

- Nothing missing from the schema — the query is accepted but the resolver fails while running. The backend logs for this request will show the underlying cause.

4. Associate Upgrade

Path: `/associate-upgrade` **Type:** Schema mismatch
Request: GetAllUpgradeRequests / ExportUpgradeRequests — features/associate-upgrade/hooks/use-upgrade-requests.ts, use-upgrade-export.ts

Impact. The upgrade requests list cannot load, and the upgrade-type and date-range filters cannot work.

Status	Error message
500	`Unknown argument "upgradeType" on field "Query.getAllUpgradeRequests".`
500	`Unknown argument "startDate" on field "Query.getAllUpgradeRequests".`
500	`Unknown argument "endDate" on field "Query.getAllUpgradeRequests".`

What the backend needs

- Arguments `upgradeType`, `startDate` and `endDate` on `Query.getAllUpgradeRequests`

5. Associates — Performance

Path: `/associates/performance` **Type:** Schema mismatch
Request: GetSystemAssociatesDashboard — features/associate-managers/hooks/use-system-associates-dashboard.ts

Impact. The performance dashboard cannot load.

Status	Error message
500	`Cannot query field "contractSize" on type "ManagerDashboardSalesRevenue".`

What the backend needs

- Field `ManagerDashboardSalesRevenue.contractSize`

6. Associates — Managers

Path: `/associates/managers` **Type:** Schema mismatch
Request: AdminGetManagerDashboard / GetAllManagersDashboard / ManagerDashboard — features/associate-managers/hooks/use-manager-dashboard.ts, use-all-managers-dashboard.ts

Impact. The manager dashboard cannot load. Adding this one field fixes both associate pages.

Status	Error message
500	`Cannot query field "contractSize" on type "ManagerDashboardSalesRevenue".`

What the backend needs

• Field `ManagerDashboardSalesRevenue.contractSize` (same gap as Associates — Performance)

7. Customer Success — CS Manager Performance

Path: `/customer-managers` **Type:** Schema mismatch
Request: GetCSManagerDashboard / GetAllCSManagersDashboard — features/cs-managers/hooks/use-cs-manager-dashboard.ts

Impact. The CS manager dashboard cannot load. This is the largest gap: 23 errors from one request. It covers the ticket targets, the plan filters, sorting and estate filter, and the extra plan-row columns.

Status	Error message
500	`Unknown type "CSPlanFilter".`
500	`Unknown type "CSPlanSort". Did you mean "PlanRow"?`
500	`Unknown argument "filter" on field "Query.getCSManagerDashboard".`
500	`Unknown argument "search" on field "Query.getCSManagerDashboard". Did you mean "year"?`
500	`Unknown argument "estate" on field "Query.getCSManagerDashboard".`
500	`Unknown argument "sort" on field "Query.getCSManagerDashboard".`
500	`Cannot query field "ticketsResolvedTarget" on type "CSManagerTargets".`
500	`Cannot query field "ticketsEntered" on type "CSManagerTargets".`
500	`Cannot query field "ticketsResolved" on type "CSManagerTargets".`
500	`Cannot query field "ticketResolutionRate" on type "CSManagerTargets".`
500	`Cannot query field "ticketFlow" on type "CSManagerTargets".`
500	`Cannot query field "ticketsComponent" on type "CSManagerPerformanceScore". Did you mean "deedsComponent" or "allocatedComponent"?`
500	`Cannot query field "dueThisPeriod" on type "OnboardingBacklog".`
500	`Cannot query field "dueCarriedOver" on type "OnboardingBacklog".`
500	`Cannot query field "phone" on type "PlanRowCustomer".`
500	`Cannot query field "assetId" on type "PlanRow". Did you mean "asset"?`
500	`Cannot query field "location" on type "PlanRow". Did you mean "allocation"?`
500	`Cannot query field "size" on type "PlanRow".`
500	`Cannot query field "units" on type "PlanRow".`
500	`Cannot query field "allocationStatus" on type "PlanRow". Did you mean "allocationLabel" or "allocation"?`
500	`Cannot query field "lastAttempt" on type "PlanRow".`
500	`Cannot query field "filterCounts" on type "CSManagerDashboardResponse".`

Status	Error message
500	`Cannot query field "estates" on type "CSManagerDashboardResponse".`

What the backend needs

• Enum/input types `CSPlanFilter` and `CSPlanSort`
• Arguments `filter`, `search`, `estate`, `sort` on `Query.getCSManagerDashboard`
• `CSManagerTargets`: `ticketsResolvedTarget`, `ticketsEntered`, `ticketsResolved`, `ticketResolutionRate`, `ticketFlow`
• `CSManagerPerformanceScore.ticketsComponent`
• `OnboardingBacklog`: `dueThisPeriod`, `dueCarriedOver`
• `PlanRowCustomer.phone`
• `PlanRow`: `assetId`, `location`, `size`, `units`, `allocationStatus`, `lastAttempt`
• `CSManagerDashboardResponse`: `filterCounts`, `estates`

8. Customer Success — Tickets

Path: `/tickets` **Type:** Schema mismatch
Request: GetTickets / TicketQueueStats — features/tickets/hooks/use-tickets.ts

Impact. The ticket inbox cannot load, so the whole Tickets section is unusable.

Status	Error message
500	`Unknown type "TicketListFilterInput". Did you mean "MarketplaceFilterInput", "MeetingListFilterInput", or "TicketTypeFilter"?`
500	`Cannot query field "getTickets" on type "Query".`

What the backend needs

• Input type `TicketListFilterInput`
• Query `getTickets`

9. Customer Success — Issues

Path: `/issues` **Type:** Schema mismatch
Request: GetIssues — features/tickets/hooks/use-issues.ts

Impact. The issues list cannot load, so the whole Issues section is unusable.

Status	Error message
500	`Unknown type "IssueStatus". Did you mean "AdminStatus", "DoaStatus", or "PlotStatus"?`
500	`Cannot query field "getIssues" on type "Query".`

What the backend needs

• Enum `IssueStatus`
• Query `getIssues`
